DISEASE DIAGNOSIS SYSTEM

SHIVAM SRIVASTAVA

B. Tech, Department of Computer Science Engineering, Kalinga University, Bhuvaneshwar, Orissa, India

ABSTRACT

The main objective of this project is to implement an Android based Healthcare Information System. This system will help the users to identify certain diseases by answering certain questions asked by the system. Based on the diagnosis received, the user will be getting some suggestion of medicines that are available at the local chemist without prescription with an advice to visit the doctor. The database will be developed with open source software. This application will also provide online help to the patients to get more detail about the already diagnosed disease.

KEYWORDS: Medical Prescription, Differential Diagnosis, Healthcare, Disease Detector, Disease Analyser, Ayurvedic Diagnosis, Allopathic Diagnosis
