### **ABSTRACT**

Limnological investigations in the Punpun river of Nabinagar (Bihar) were conducted for one year i.e. January 2018 to December 2018, to study the changing physico – chemical parameters in the river water due to natural and man-made activities. The study revealed that the river water is fit for industrial as well as irrigational purposes but not safe for bathing and drinking purposes. The required management and conservation strategies of river were also studied.
